

TRANSITNET

SECURE HANDLING OF TRANSIT PROCEDURES ONLINE

Customs Service

SGS

TRANSITNET:

THE FULL-SERVICE SOLUTION FOR NCTS TRANSIT PROCEDURES

Companies that transport goods across borders or between customs warehouses must declare the transit according to customs law with the relevant customs authorities. In the trade zones of the European Union (EU), the European Free Trade Association (EFTA) and Turkey and Serbia, transit declarations must be submitted in the computerised transit system (NCTS). The NCTS is an IT system via which the customs authorities of the participating countries exchange data electronically. In the Russian and Belarussian Customs Union, a similar system exists. This IT-supported transit service moves the required import checks away from borders, and speeds up the declaration process.

TransitNet is your direct access to the NCTS environment. This web based single window system enables you to declare transit procedures to customs authorities inside and outside the EU (including Belarus) with just the one tool.

SGS provides the guarantee to Customs and monitors transits registered via TransitNet. Naturally, we guarantee you 100% neutrality, confidentiality and conformity with the law.

OPERATING 24/7/365 TRANSITNET IS AVAILABLE IN 20 EU AND NON-EU COUNTRIES

THE ADVANTAGES

When you work with SGS and TransitNet, you can:

- Register transit procedures online quickly and inexpensively
- Retain full cost control (pay per click; no fixed costs)
- Secure transit procedures via guarantees from SGS
- Open multinational transit procedures in many countries via one system
- Work conveniently - TransitNet is web-based and requires no software installation
- Follow the status of your transit procedures in the TransitNet monitoring system
- Contact local SGS customer services to get support if there are irregularities during or after the transit procedure
- Get predictable service and guarantee
- Integrate your own system with TransitNet

TransitNet can be implemented simply. You can open transit procedures yourself online or commission the specialists at SGS to do it. The service package also includes training for your employees if required. With a pan-European network, local experts are available to support customers on-site, as needed, with handling transit traffic 24/7/365.

GLOBAL NETWORK, REGIONAL EXPERTISE

With SGS you have a strong partner for the secure handling of customs law relating to transit procedures. The product testing group represents an international network as well as 150 years of experience in goods and export certification, and pre-shipment checks; in short, for comprehensive expertise in logistics.

As the world's leading company in the fields of checking, testing, verification and certification, we set recognised standards for quality and integrity. We are represented in almost every country in the world with 2,600 branches and laboratories and more than 97,000 employees, and we are familiar with local requirements.

In its unique worldwide network, SGS offers cross-sector solutions and provides results that are precisely tailored to the requirements of the sector and market. Founded in 1878, SGS's head office is located in Geneva and we have been active in Germany since 1920. SGS works for manufacturers and exporters, governments and suppliers, in cross-border trade and in the inspection business in harbours and logistics centres worldwide.
